Personal profile

A frontend developer with a passion for building web applications and playing with codes. Previous experience in teaching and entrepreneurship fosters critical thinking when approaching challenges.

Tech Skills

- HTML, CSS, Javascript, React, Node.js, MongoDB, RESTful API, Styled-Components, Responsive Design, npm, Postman, Heroku, Visual Studio Code.

Projects

- **MyFlix app** is a full-stack movie application built with MERN stack .The server-side was built with JavaScript, MongoDB, Mongoose, Node.js & Express. The API provide users with access to the data about movies, directors, genres, and actors. The client-side was built with React and Bootstrap. In this application, a user can create an account, add and delete movies from favorites as well. The link: <https://myflix1.netlify.app/>
- **Meet app** is a serverless, progressive web application that uses the Google Calendar API to fetch upcoming events. The app is built with React using a test-driven development (TDD) approach. The serverless function is hosted by AWS. The app allows user to search for a city and get a list of events hosted in that city. The user can view charts that display how many events will take place in that city on upcoming days as well as view the popularity of event genres in the form of a pie chart.
